PC Workstation
Back Office Software

PC Workstation is a software application designed for Windows® that moves the Manager functions of the POS system to the familiar environment of a back office computer. The software integrates seamlessly into the point of sale network and communicates directly and continuously with the POS terminals to provide real-time reports.

SIMPLE.
AFFORDABLE.
SOLUTIONS.

System Features

- Program the POS system through a familiar, intuitive interface
- Program changes are automatically downloaded to the POS terminals
- Real-time reports for current day, current week and current period
- Complete system reporting on laser or ink jet printer
- Archived reports available for 12 months
- Enhances POS Delivery module with Customer Order History
- System resets can be performed through system scheduler
- Over 150 Reports
- Requires minimal setup and training
